Build

Everyone uses different techniques to organize their digital workspace. Chiron's smart activity containers and plugin integration automatically customize and organize the workspace to what works best.

Keep

Mental contexts are hard to track and replicate. With Chiron you can create time-stamped memos, save versions of digital workspace, and view last opened applications to help you keep the context.

Switch

It's easy to be distracted during a transition. Chiron uses activity containers and the timeline to keep activities and versions organized, so you can quickly switch between activities or view previous changes.
